

CONTA CONNECT
TEST-DISCONNECT TERMINALS **SPTK**

Test-disconnect terminals SPKT

Test-disconnect terminals are mainly used for electricity generation and supply applications. They are perfect for the wide variety of switching demands in the current-transformer secondary circuits that predominate in these applications. Current transformers must always have a closed secondary circuit, for use when electricity meters and measuring instruments are being replaced, or when making comparative measurements. All versions provide touch-safe protection in compliance with BGV A3. A captive, screw-on sliding partition is used to separate the current and voltage paths. The switch position is always easy to detect since the disconnect screw has a yellow insulating sleeve. In all versions, the STBI19/4 socket plugs can be contacted for a test pick-off using the PS 4 test plug or the conventional (4 mm) insulated test plugs.

Features:

- Up to four shafts: used for potential distribution or test purposes
- Lengthwise partition operated with screw to ensure deliberate switching operations
- Application-compliant design with similarly shaped feed-through terminals

Test-disconnect terminals SPKT

The features in detail

Cross-switches QVSI

The **VH 19** connecting sleeves and the **BS 25** screws or **STB 19/4 L** socket plugs are required for fastening the **QVSI** cross-switches above the terminal block. The cross-switches are available from 2 to 10 poles.

Cross-switches QSBI

The **QSBI** cross-switches are positioned within the terminal block and make contact over the sliding contact on the LT- or QT-terminals. The cross-switches are available from 2 to 4 poles.

Insulated socket plugs STBI 19/4

The **STBI 19/4** socket plugs can be screwed into the inside cross-connection channels. They are used to hold the **PS 4** test plugs or conventional (4 mm) insulated test plugs.

Insulated socket plugs STBI 19/4 L

The **STBI 19/4 L** socket plugs can be screwed into the inside cross-connection channels. They are used together with the **VH 19** connecting sleeves to establish contact with the **QVSI** cross-switches. They are also used to hold the **PS 4** test plugs or conventional (4 mm) insulated test plugs.

Mounting screw BS 25

The **BS 25** mounting screws are used together with the **VH 19** connecting sleeves to establish contact with the **QVSI** cross-switches.

Short-circuit plug KS-SQI

The **KS-SQI** short-circuit plugs are used to make pluggable cross-connections between the **SPTK** terminals in the outer cross-connection channels. The plugs can also be put in the built-in park position of the **SPTK** terminals when not in use. The short-circuit plugs are available from 2 to 5 poles.

Switch lock PTK-SP

The **PTK-SP** switch lock is mounted over the slider on the **SPTK** terminals. It keeps the partition screws from being accidentally touched by a screwdriver.

Cross-connector SQI 6

The **SQI** cross-connector is used to make a pluggable cross-connection between the **SPTK** terminals in the outer cross-connection channels. The cross-connectors can also be put in the built-in park position of the **SPTK** terminals when not in use. The cross-connectors are available from 2 to 30 poles.

Test-disconnect terminals SPTK 6

Screw connection system

- Foot can be snapped on TS35 DIN rail
- Housing made from polyamide 6.6 UL 94-V0
